**Trends in the relationship between global education expansion and
 unemployment: a review of literature by using the science mapping tool**
 Jia-Ling Kang
 National ChengChi University, Ph.D. student

Under the trend of increasing global demand for talents, education in all countries has strengthened the cultivation of talents with international competitiveness. Education has developed significantly in both quality and quantity. Under the rapid expansion of education in various countries, graduates are in the workplace. The phenomenon of oversupply has arisen, and the unemployment rate has been high, which has raised doubts about the imbalance between talent cultivation and industrial demand.

This research uses bibliometrics research to search the Web of Science (WOS) database based on relevant literature from 2013 to 2019 to analyze its content, relevant topics, and research trends. This study uses Citespace as a tool, which aimed at WOS over the years and the number of citations, essential authors, paper publishing areas, keywords, essential papers, and international citations. For the first time, this paper uses the literature analysis of trends in the relationship between global education expansion and to order to provide a reference for the development of subsequent related research.

Keywords: bibliometrics, global education, unemployment, citation analysis

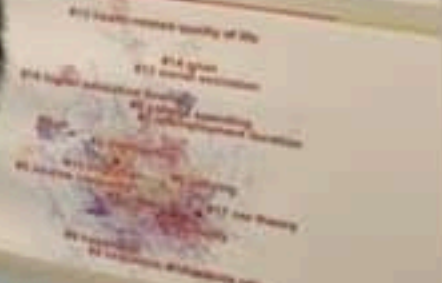

Introduction

The global expansion of education promoted class mobility and changed the structure of the young workforce while providing greater access to higher education. As a result of the popularization of education, the proportion of education budget increases, and the population with higher degree keeps rising. The mechanism has a significant application for the most well-off people in the higher education system. The research field is becoming more and more important.

Conclusion

Over the past few years, the research on the relationship between global education expansion and unemployment has become more and more important. This study uses Citespace as a tool to analyze the literature in WOS and the results are as follows:

Result

Conclusion

the literature in WOS and the results are as follows:
